

Brandon Thurgood, VMWare systems engineer in Limerick, Ireland, earned the individual award for his work on the divestiture project resulting from the sale of GM manufacturing operations to Isuzu Motors in South Africa.

Thurgood diligently identified, designed, built, coordinated and performed nearly all the Global Infrastructure Midrange Platform Service efforts for this project, while supporting the PSA divestiture and other ongoing duties. During the nine-month project, he moved from South Africa to Ireland with his family without missing a beat.

Thurgood welcomed all opportunities to help other IT team members; volunteering his time, expertise and insight to discuss solution options and identify actions to help GM IT deliver exceptional business results. He continually exceeded expectations and designed and engineered a variety of solutions.
